# Actuarial Weather Extremes: December 2020

## U.S. Western Drought, Eastern Flood, 2<sup>nd</sup> Warmest Year Globally

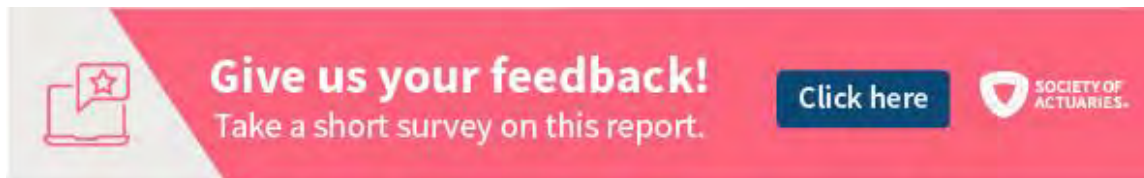

### Overview

This report examines three extreme weather phenomena in December 2020: Continuing drought in the Western United States, heavy precipitation, snowfall, and flood in the Eastern U.S., and ranking 2020 global land and ocean temperature vs previous annual averages of the last 141 years.

**Drought:** In the Southwest U.S., many areas saw moderate or greater drought conditions for all 52 weeks of 2020. Additionally, 2020 was a year of drought condition degradation, with some areas degrading several classes over the year. For the year, drought losses in the U.S. were in the range of \$4.5 Billion (See Figures 1 and 2).<sup>12</sup>

**Precipitation, Snow and Flood:** On December 24/25, mainly from Ohio east through Pennsylvania, New York, Massachusetts and into Virginia, record amounts of precipitation and snow fell which were followed by flooding mainly in Pennsylvania, New York and Virginia (See Figures 3, 4, 5).

**Historically Warm Global Temperature:** As shown in Figure 6, 2020 was the second warmest year dating back to 1880 when ranking average global land and ocean temperature, second only by 0.02 degrees Celsius to 2016. 2020 was 0.98 degrees Celsius above the 20<sup>th</sup> Century average land and ocean temperature and 2016 was 1.00 degree above.

**Give us your feedback!**

## Drought

Figure 1 shows that December 2020 drought conditions continue to be widespread and significant, especially in much of the western U.S., including in those areas that had been impacted by wildfires. Compared to late December 2019, the drought conditions degraded several classes across the six class classifications of: No Drought, Abnormally Dry, Moderate Drought, Severe Drought, Extreme Drought and Exceptional Drought. Some areas in the Southwest U.S. degraded a full five classes over the year.

<https://www.climate.gov/maps-data/data-snapshots/usdroughtmonitor-weekly-ndmc-2019-12-31?theme=Drought>

<https://www.climate.gov/maps-data/data-snapshots/usdroughtmonitor-weekly-ndmc-2020-12-29?theme=Drought>

According to the NOAA National Centers for Environmental Information (NCEI) Billion-Dollar Weather and Climate Disasters Overview, 2020 set the new record of 22 billion-dollar loss events far exceeding the previous annual record of 16 events in 2011 and 2017. Figure 2 shows that for the year 2020, drought (1 of the 22 events) losses were in the range of \$4.5 Billion.<sup>3</sup>

## Late December Precipitation, Snow and Flooding

### PRECIPITATION

A system moved through the Midwest and Northeast U.S. on December 25 setting record amounts for rain and snowfall. (See Figure 3). Across the Northeast U.S., from Pennsylvania through Maine, power outages affected some 300,000 people. Some areas in the Interior Northeast U.S. had 3 inches of rain fall in areas that had recently had snowfall.<sup>4</sup>

**Figure 3**  
**GLOBAL HISTORICAL CLIMATOLOGY NETWORK (GHCN) STATIONS WITH U.S. DAILY PRECIPITATION RECORDS IN EXCESS OF 3 INCHES AND SNOW RECORDS IN EXCESS OF 6 INCHES SET ON DECEMBER 25, 2020 FOR DECEMBER DAILY PRECIPITATION AND SNOW BACK TO 1960. THE CHART INDICATES INCHES OF DAILY RAINFALL OR SNOWFALL.**

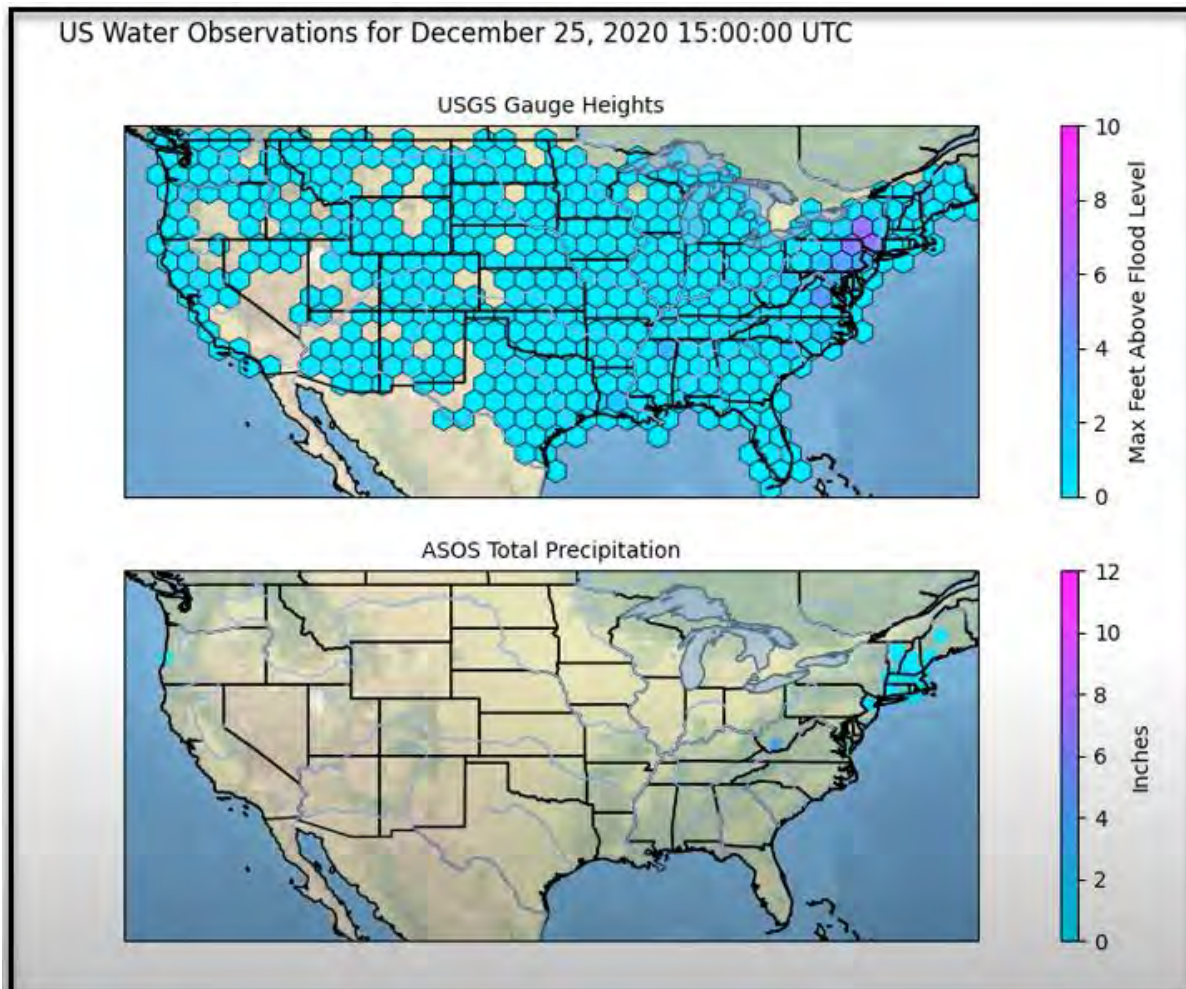

Source: GHCN station data (Accessed January 4, 2021). [ftp://ftp.ncdc.noaa.gov/pub/data/ghcn/daily/ghcnd\\_all.tar.gz](ftp://ftp.ncdc.noaa.gov/pub/data/ghcn/daily/ghcnd_all.tar.gz)

<sup>4</sup> December 27, 2020. [Storm Produces White Christmas, Power Outages in East | AccuWeather](#)

**FLOODING**

**Time Lapse of Flooding and Precipitation:** By clicking on the link below Figure 4, you can see the December 2020 hourly time lapse of precipitation and subsequent flooding. The heavy precipitation seen December 24/25 is followed by flood conditions primarily in New York, Pennsylvania, and Virginia. The precipitation shown here is consistent with the record setting station readings shown in Figure 3 above.

**Figure 4**  
**FLOOD AND PRECIPITATION DECEMBER 2020 TIME LAPSE ANIMATION USING DATA FROM UNITED STATES GEOLOGICAL SURVEY (USGS) STREAMGAGE DATA AND THE IOWA STATE UNIVERSITY AUTOMATED SURFACE OBSERVING SYSTEM (ASOS)**

Time Lapse created by Matthew Self, ASA using USGS data, ASOS data and Python programming. Data accessed January 1, 2021.

Source: IA State University ASOS, retrieved 1/1/2021: <https://mesonet.agron.iastate.edu/request/download.phtml>

Ranking December 2020 streamflow versus past years, 2020 had the heaviest stream flows in the MidAtlantic states and in the Northeast U.S., as seen in Figure 5. Many areas in the Western U.S. had particularly low stream flows in December 2020 vs past years, but the percentiles in the North Carolina through Maine states were high and consistent with areas shown to have flooding in late December in Figure 4.

## Global Land and Ocean Temperature in 2020 vs 20<sup>th</sup> Century Average

Looking at the full year 2020, the global average temperature for the year was second only to 2016 as the highest anomaly above the 20<sup>th</sup> Century average global temperature. 2020 was the 2<sup>nd</sup> warmest on record for this global measure, at 0.98 degrees Celsius above the 20<sup>th</sup> century average, second only to 2016 which was 1.00 degree Celsius above the 20<sup>th</sup> Century average.

## Rough Assessment of the Losses Caused by the Recent Extreme Weather

Economic and insured losses are often difficult to estimate in the immediate aftermath of an extreme weather event. With the passage of time, the extent of the losses gradually becomes clearer.

### 2020 Drought Losses

In the Southwest United States, many areas saw moderate or worse drought conditions for all 52 weeks of 2020. Additionally, 2020 was a year of drought condition degradation, with some areas degrading several classes over the year. For the year, drought losses in the U.S. were in the range of \$4.5 Billion (See Figures 1 and 2).<sup>56</sup>

## Data

**Snow and precipitation data** used in this report was obtained from the **Global Historical Climatology Network** (“GHCN”) weather database, which provides daily weather observations from over 100,000 weather stations worldwide, covering over 180 countries. The database is publicly available through the National Oceanic and Atmospheric Administration (NOAA) via the following FTP site:

[ftp://ftp.ncdc.noaa.gov/pub/data/ghcn/daily/ghcnd\\_all.tar.gz](ftp://ftp.ncdc.noaa.gov/pub/data/ghcn/daily/ghcnd_all.tar.gz)

Filename: [ghcnd\\_all.tar.gz](#)

### Automated Surface Observing System (ASOS) temperature and precipitation data

The steps below show how to get the hourly temperature and precipitation at the STL Airport, as an example, from the Iowa State University Automated Surface Observing System (ASOS):

IA State: <https://mesonet.agron.iastate.edu/request/download.phtml>

- 1) Select “Missouri ASOS” as the network and click “Switch to Network”
- 2) In the list of available stations, select the “[STL] ST. LOUIS” station, and click “Add Selected”
- 3) In the “Select From Available Data” section, choose the “Air Temperature [F]” and “1 hour Precipitation [inch]” options.
- 4) Set the date range to 2020-October-1 and 2020-October-31 (or whatever range is desired)
- 5) Select “Yes” for “Include Latitude + Longitude”
- 6) Click “Get Data” at the bottom

These steps would give you the results from the URL below.

<https://mesonet.agron.iastate.edu/cgi-bin/request/asos.py?station=STL&data=tmpf&data=p01i&year1=2020&month1=10&day1=1&year2=2020&month2>

<sup>5</sup> National Integrated Drought Information System. January 7, 2021. [2020 in Review: A Look Back at Drought Across the United States in 12 Maps | Drought.gov](#)

#### USGS Flood Data

Source: United States Geological Survey (USGS) Daily Values:

Daily Values: <https://waterservices.usgs.gov/rest/DV-Test-Tool.html>

- a) Select "List of Sites" in the Major Filters section and enter the Site Number(s) of interest
- b) In the Date Ranges section, select "Return all values within an absolute date range" and enter the Date Range of interest
- c) Enter "00003" for the Statistics Code; 00003 is the Mean Observation
- d) For "Sites serving parameter codes", enter **00060** for Discharge, cubic feet per second or **00065** for Gage Height, feet.
- e) At the bottom click "Generate the URL" then click "Run the Generated URL"

Historical Means: <https://waterservices.usgs.gov/rest/Statistics-Service-Test-Tool.html>

- a) Enter the Site Number(s) of interest
- b) Select "Monthly statistics" and the "Mean (average)" Statistic Type
- c) Enter 00060 in the box for "Sites serving parameter codes"
- d) At the bottom click "Generate the URL" then click "Run the Generated URL"
- e) The output will be the Mean Discharge for each month in the historical record

#### NOAA National Centers for Environmental Information Data

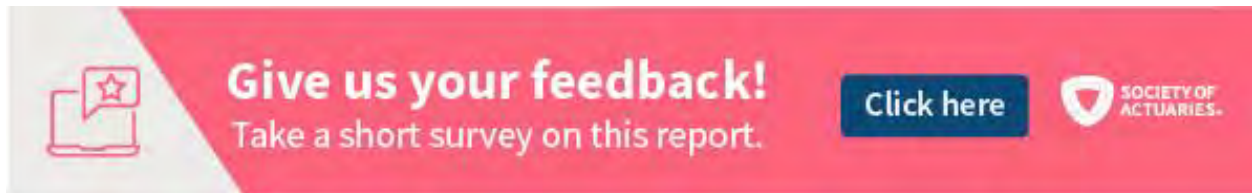

Source: Global Land and Ocean Year to Date Temperature Anomalies. December Year to Date totals for each year 1880 to 2020. [https://www.ncdc.noaa.gov/cag/global/haywood/globe/land\\_ocean](https://www.ncdc.noaa.gov/cag/global/haywood/globe/land_ocean)

## Acknowledgments

The authors wish to thank Matthew Self, ASA for his contributions to the assimilation of ASOS precipitation data and USGS flood, gauge and streamflow data and information that the authors used for this analysis.

## Feedback

A horizontal banner with a red background. On the left, there is a white icon of a laptop with a star in a speech bubble above it. To the right of the icon, the text "Give us your feedback!" is written in large, bold, white font. Below this, in a smaller white font, it says "Take a short survey on this report." To the right of the text is a dark blue button with the white text "Click here". Further to the right is the Society of Actuaries logo, which consists of a white shield with a red triangle inside, followed by the text "SOCIETY OF ACTUARIES" in white.

## About The Society of Actuaries

With roots dating back to 1889, the [Society of Actuaries](#) (SOA) is the world's largest actuarial professional organizations with more than 31,000 members. Through research and education, the SOA's mission is to advance actuarial knowledge and to enhance the ability of actuaries to provide expert advice and relevant solutions for financial, business and societal challenges. The SOA's vision is for actuaries to be the leading professionals in the measurement and management of risk.

The SOA supports actuaries and advances knowledge through research and education. As part of its work, the SOA seeks to inform public policy development and public understanding through research. The SOA aspires to be a trusted source of objective, data-driven research and analysis with an actuarial perspective for its members, industry, policymakers and the public. This distinct perspective comes from the SOA as an association of actuaries, who have a rigorous formal education and direct experience as practitioners as they perform applied research. The SOA also welcomes the opportunity to partner with other organizations in our work where appropriate.

The SOA has a history of working with public policymakers and regulators in developing historical experience studies and projection techniques as well as individual reports on health care, retirement and other topics. The SOA's research is intended to aid the work of policymakers and regulators and follow certain core principles:

**Objectivity:** The SOA's research informs and provides analysis that can be relied upon by other individuals or organizations involved in public policy discussions. The SOA does not take advocacy positions or lobby specific policy proposals.

**Quality:** The SOA aspires to the highest ethical and quality standards in all of its research and analysis. Our research process is overseen by experienced actuaries and nonactuaries from a range of industry sectors and organizations. A rigorous peer-review process ensures the quality and integrity of our work.

**Relevance:** The SOA provides timely research on public policy issues. Our research advances actuarial knowledge while providing critical insights on key policy issues, and thereby provides value to stakeholders and decision makers.

**Quantification:** The SOA leverages the diverse skill sets of actuaries to provide research and findings that are driven by the best available data and methods. Actuaries use detailed modeling to analyze financial risk and provide distinct insight and quantification. Further, actuarial standards require transparency and the disclosure of the assumptions and analytic approach underlying the work.
